### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Julie K. Morriss on December 7, 2004.

The application has been amended as follows:

In claim 6, in line 1 after "A device" inserted "--including a threaded spindle--.

In claim 6, in line 1 after "for connecting two tool parts" deleted "configured for receiving a threaded spindle".

In claim 6, in line 4 before "threaded spindle" deleted "a" and replaced with --said--.

In claim 12, in line 1 after "A connection" deleted "for".

In claim 12, in line 10 before "shoulder extending" inserted "--projecting--.

In claim 17, in line 4 after "the two tool" deleted "parts" and replaced with --pieces--.

In claim 19, in line 1 after "A device" inserted "--including a threaded spindle--.

In claim 19, in line 1 after "for connecting two tool parts" deleted "configured for receiving a threaded spindle".

In claim 19, in line 4 before "threaded spindle" deleted "a" and replaced with --said--.

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

The figure label "**Fig.**" should be deleted from the drawing.

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

3. The following is an examiner's statement of reasons for allowance:

As to claim 6, Sanderson (US 2,022,055) discloses the claimed device with the exception of comprising a threaded spindle having at least one projecting shoulder having a coaxially centered and axially inwardly extending opening configured to receive an axially positioned tool for effecting rotation of the threaded spindle when the at least one projecting shoulder is inserted within a tool part.

As to claim 12, Sanderson discloses the claimed connection with the exception of comprising a threaded spindle having at least one projecting shoulder having a coaxially centered and axially inwardly extending opening configured to receive an axially positioned tool for effecting rotation of the threaded spindle via the projecting shoulder and opening when inserted in the first or second tool piece.

It would not have been obvious to one having ordinary skill in the art at the time the invention was made to modify a connection as disclosed by Sanderson to have the above mentioned elements as the prior art neither teaches nor suggests such modifications.

Art Unit: 3679

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
